

MA511: Computer Programming

LAB 1 Assignment (Due: 25th July 2025)

[Before you start the Lab, you should change your default password.]

The goal of this lab is to help you get comfortable with the Linux command-line interface.

A. File and Directory Management

1. From the Linux terminal, run the following commands:
 - i. Create a directory (mkdir) "Assignment1"
 - ii. Move to the directory (cd)
 - iii. Check the current working directory (pwd)
 - iv. Display information about the current directory (ls)
 - v. Create an empty file named "temp" (touch)
 - vi. Display information about the file
 - vii. Redirection. Store the information obtained using the long list in a file named "temp" (ls -l /etc > temp)
 - viii. See the running process on your terminal (ps)

B. Viewing and editing text files

- i. Display the contents of the temp file (cat temp)
- ii. Display the first 10 lines of the temp file (head -10 temp)
- iii. Append a line, echo "This is the last line" >> temp
- iv. Using a text editor (gedit), create a file "AboutMe.txt". Write a few sentences about yourself in this file and save it.
- v. Print the number of lines in the file using the wc command.
- vi. Print the number of bytes in the file using the wc command.
- vii. Rename the file "list" to "test" (mv)

C. System Commands and Process Management

- i. Display the current date and time
- ii. Show current username
- iii. Show all running processes and filter to display only those related to bash:
- iv. Use the ps and the grep to print the process id of the bash shell.

Deliverables:

- Submit a single PDF file named <RollNumber>.pdf containing screenshots of output of the commands.
